# Protect your business. Build what you need.

ALT-F1 helps you protect your devices and websites, build business software and keep control of your data.

**Solution architecture**
Plan the systems, connections and hosting that fit the way you work.

**Software engineering**
Build and maintain applications around your organisation's needs.

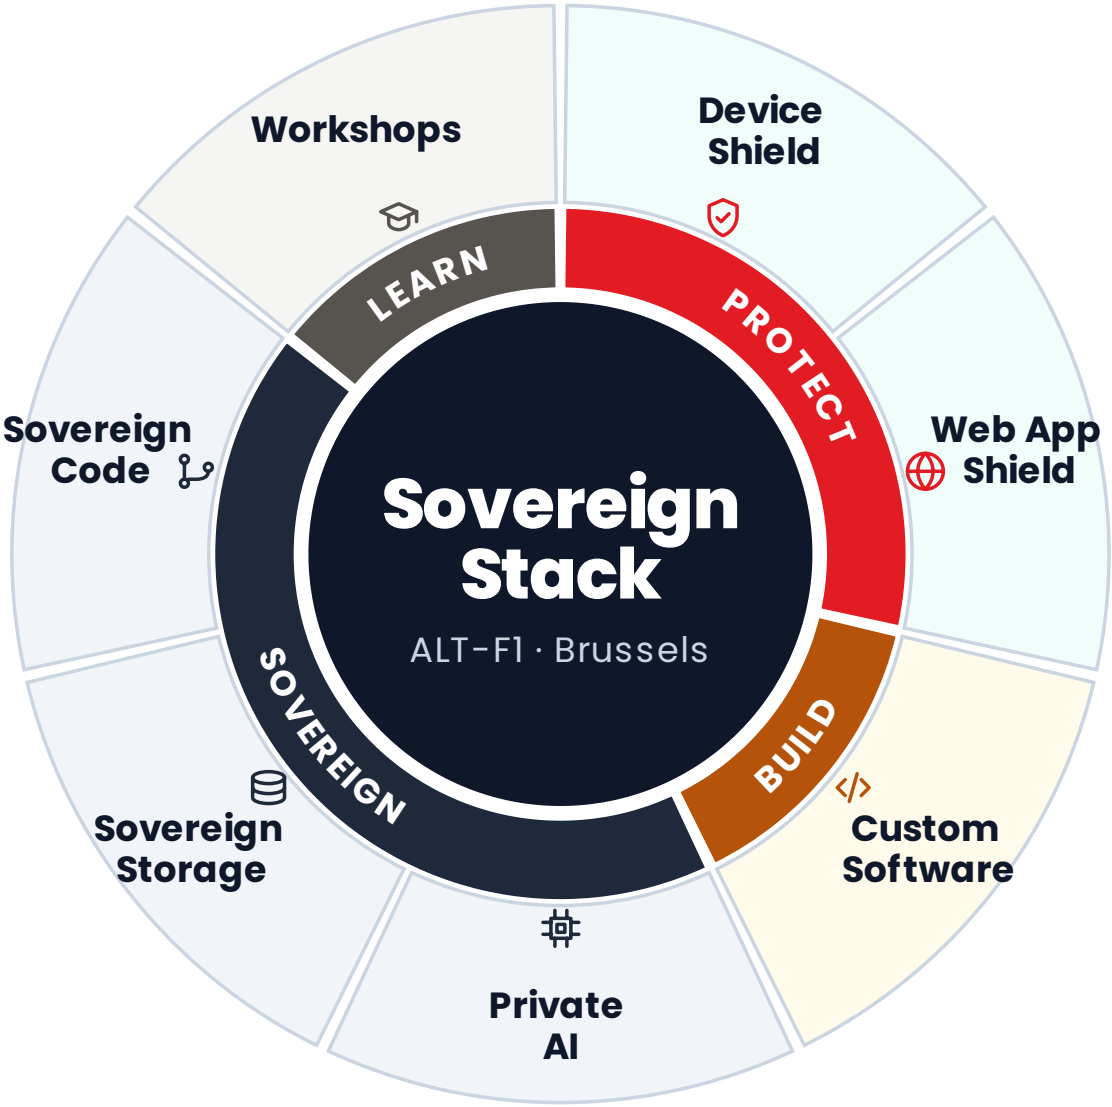

**Cybersecurity**
Protect devices, websites and the information your business relies on.

**Artificial intelligence (AI)**
AI reserved for your company, for document search, drafts and meeting transcripts.

**Belgian storage with Optimal AI**
S3 (Simple Storage Service) compatible · €16/TB/month · minimum 10 TB
**First 3 months free · Service starts 1 February 2027**
TB = terabyte. Ask for a quote to confirm taxes and any additional charges.

**Let's discuss your next project.**
Tell us what you need to protect, build or improve. We'll help you choose a practical next step.

# Device Shield

Protect your team's computers, phones and office network.

**Protect the workplace. Know how to respond.**

**Your workplace**

- Computers and phones
- Office network
- People working remotely

**Device Shield**

- Protect supported devices
- Control access to the office
- Isolate a suspected device

**An agreed response**

- Review alerts in Europe
- Agree who acts next
- Keep useful incident records

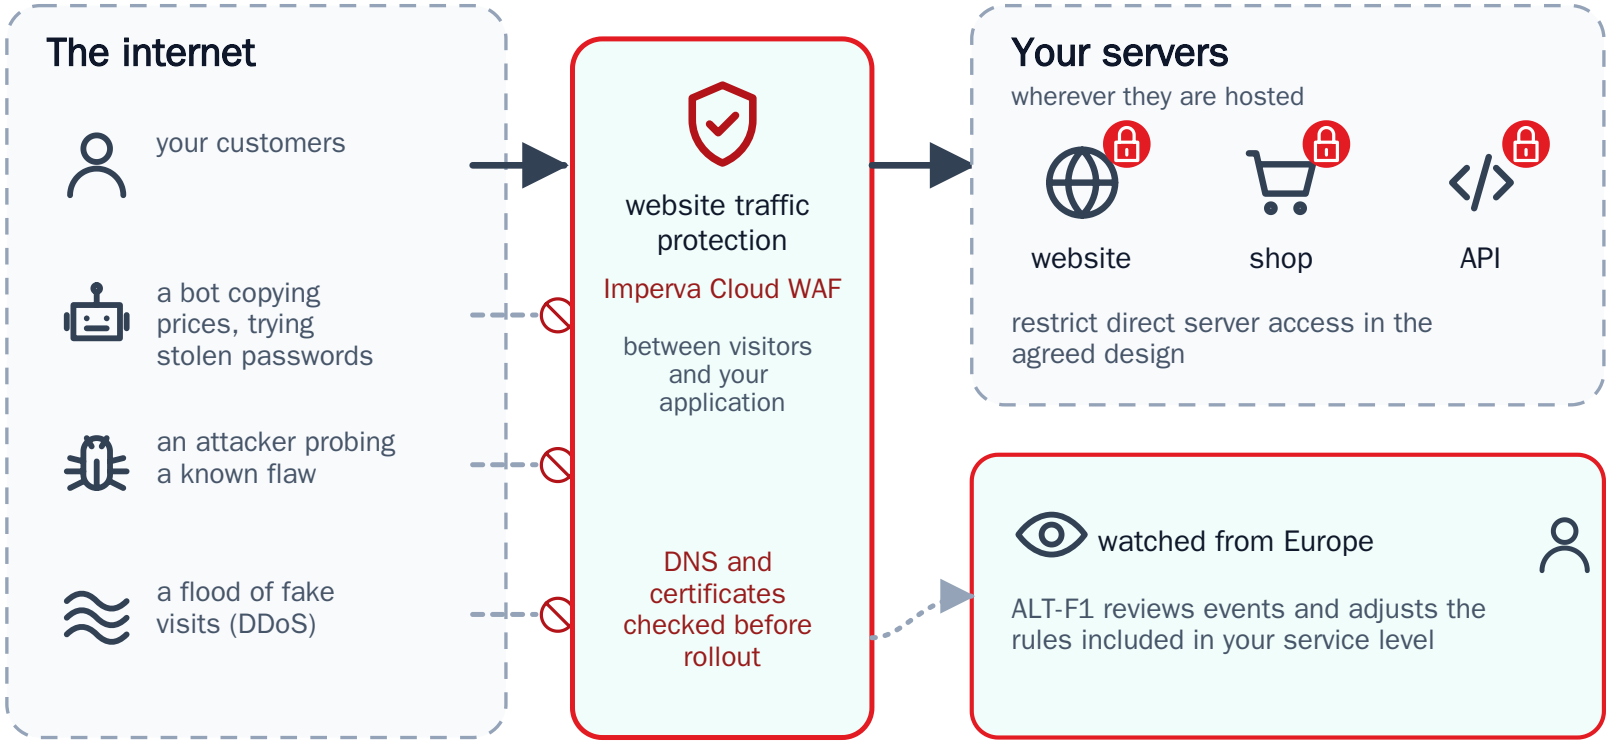

Coverage and response are agreed for your organisation.

**EDR** = Endpoint Detection and Response · **XDR** = Extended Detection and Response · **VPN** = Virtual Private Network · **MFA** = Multi-Factor Authentication
Technical terms explained: www.alt-f1.be/en/acronyms/ · Explore this service →

# Web App Shield

Filter suspicious traffic before it reaches your website or online shop.

**Check website traffic before it reaches your business.**

**Visitors and requests**

- Customers and partners
- Automated traffic
- Attempts to exploit a flaw

**Web App Shield**

- Thales Imperva filtering
- Rules for your website
- Traffic floods and bot controls

**Your website and shop**

- Allowed requests reach the site
- Direct server access reviewed
- Useful alerts for your team

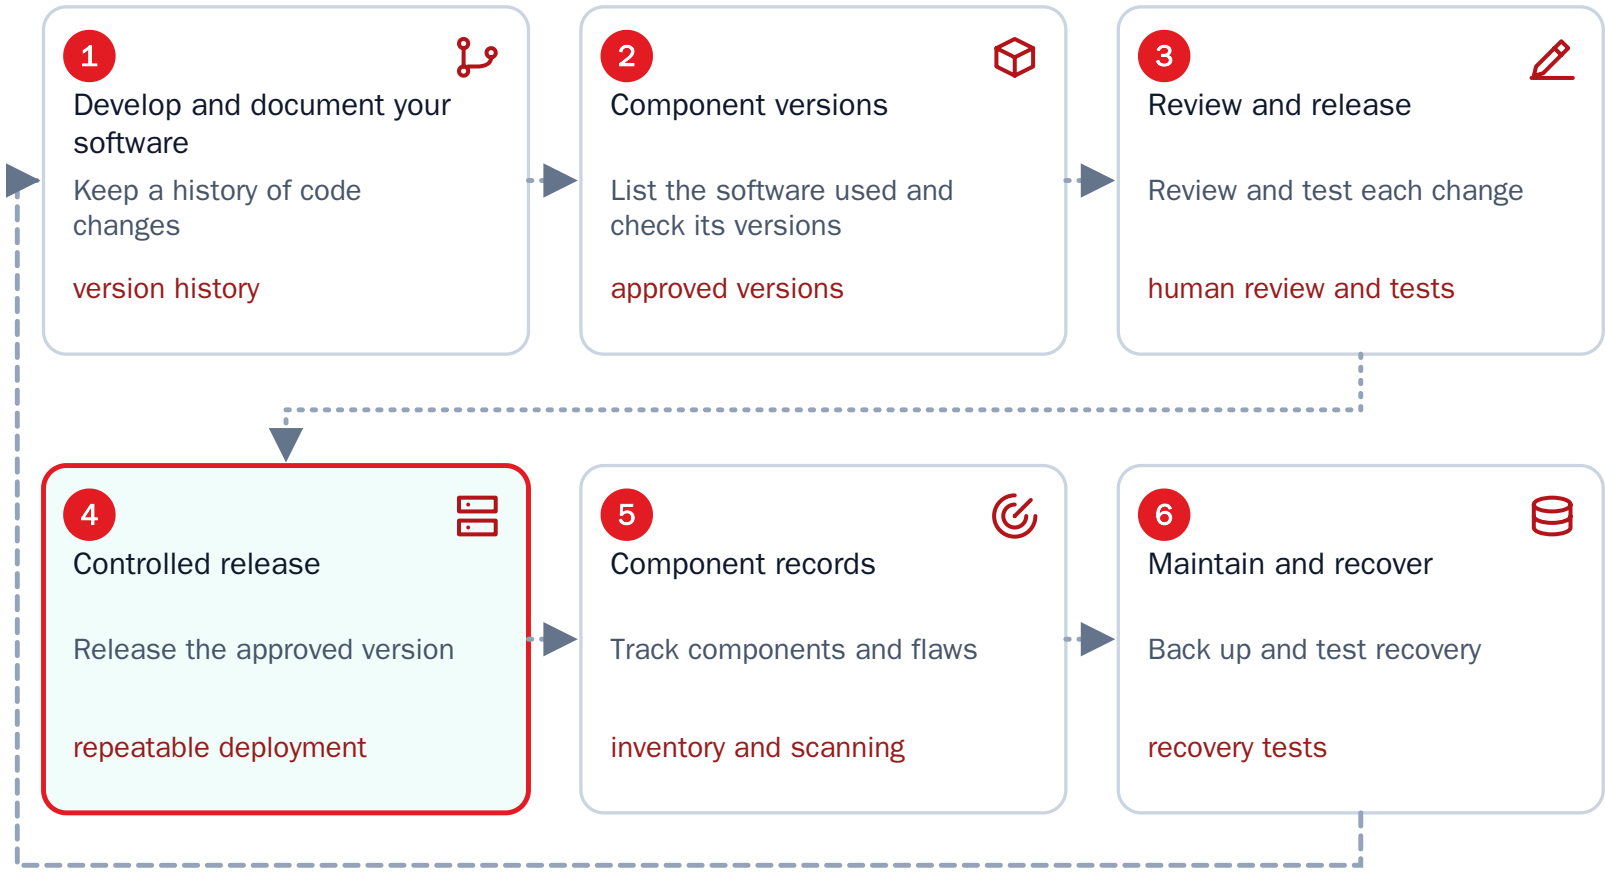

ALT-F1 configures the protection and reviews the events in your service scope.

**WAF** = Web Application Firewall · **DDoS** = Distributed Denial of Service · **API** = Application Programming Interface · **DNS** = Domain Name System
Technical terms explained: www.alt-f1.be/en/acronyms/ · Explore this service →

# Custom Software

Build and maintain business applications, workflows and connections between your existing tools.

**Build, release and maintain your application.**

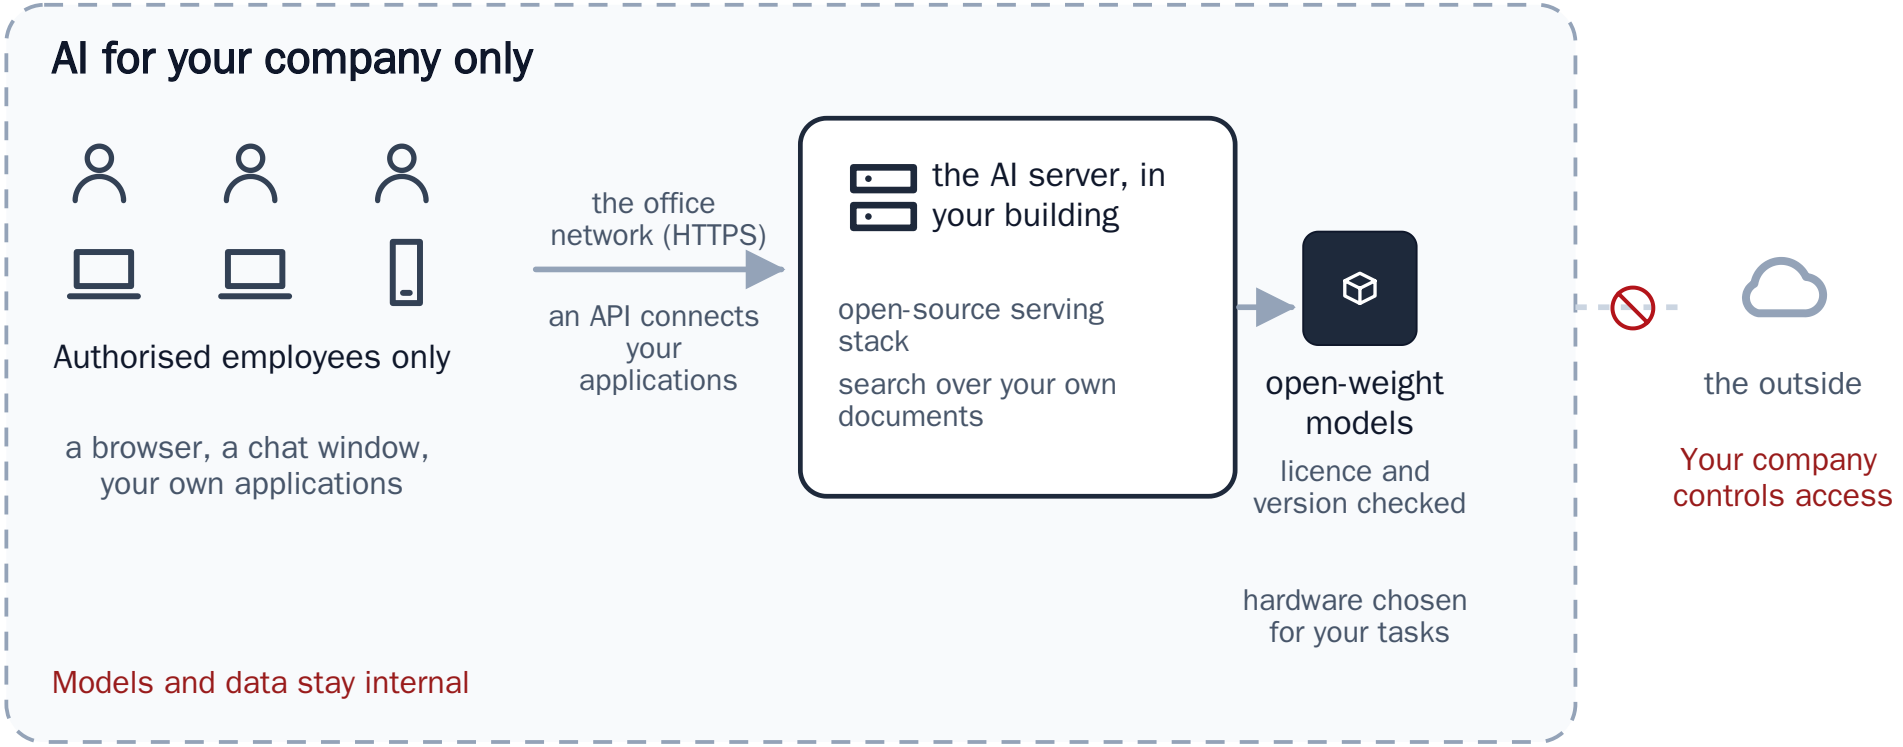

A controlled delivery process, with checks and recovery planned from the start.

**SBOM** = Software Bill of Materials · **CMDB** = Configuration Management Database
Technical terms explained: www.alt-f1.be/en/acronyms/ · Explore this service →

# Private AI

Run AI models on your company's server, with access for authorised employees only.

**Private AI models for your company.**

**Your people and documents**

- Choose useful everyday tasks
- Select the right documents
- Agree who may use them

**Private AI**

- Models run on your server
- Search your own documents
- Check licences and versions

**AI for your company only**

- Authorised employees only
- Models and data stay internal
- Your company controls access

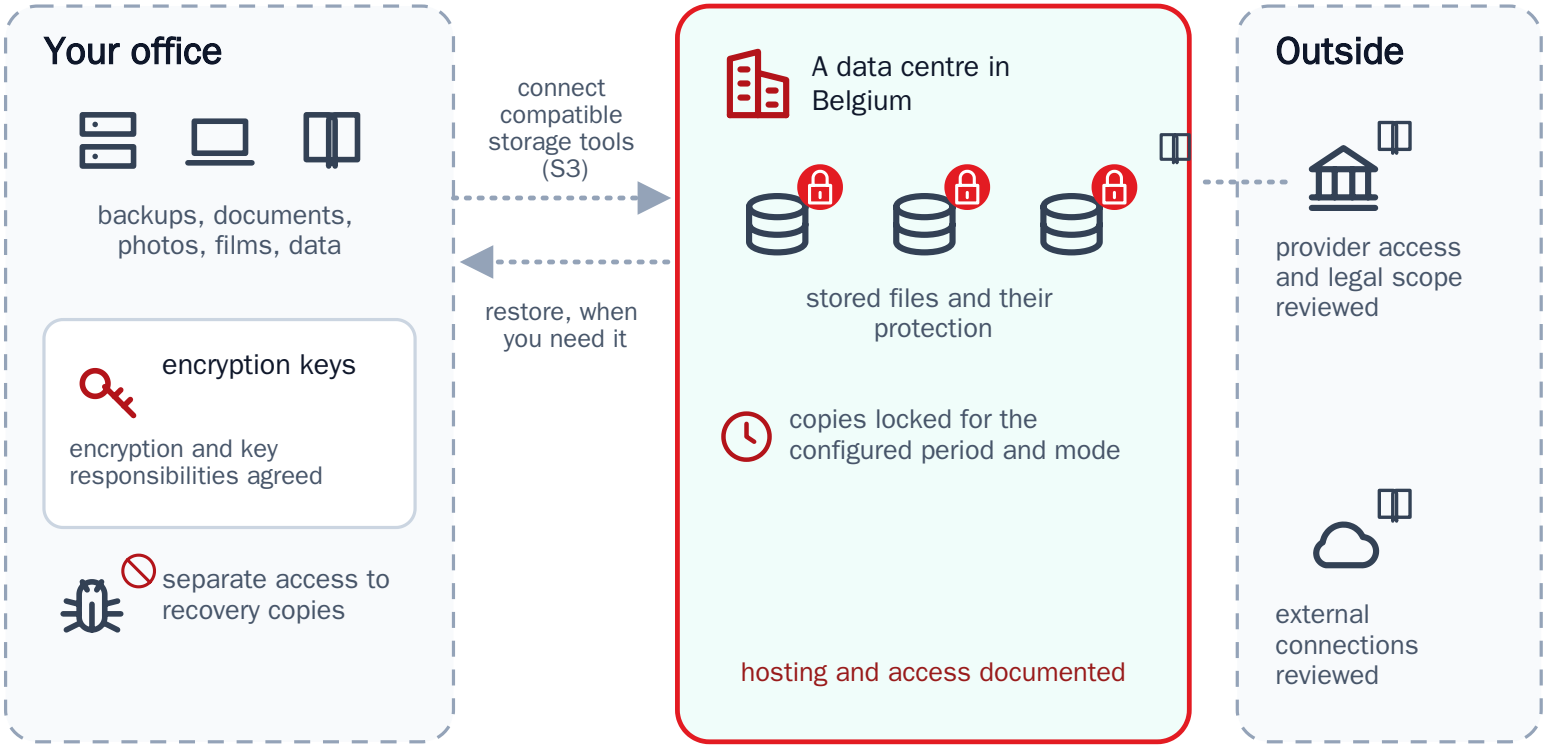

Your company decides who can use the models and access its information.

**API** = Application Programming Interface
Technical terms explained: www.alt-f1.be/en/acronyms/ · Explore this service →

# Sovereign Storage

Keep backups and files in Belgium with our storage partner Optimal AI.

**A separate backup copy. A recovery you can test.**

**Your files and backups**

- Business files and documents
- Compatible backup tools
- An agreed copy schedule

**Sovereign Storage**

- Optimal AI · Belgium
- Choose retention settings
- Agree access and encryption

**Tested recovery**

- Restore a sample copy
- Check the recovered files
- Measure the recovery time

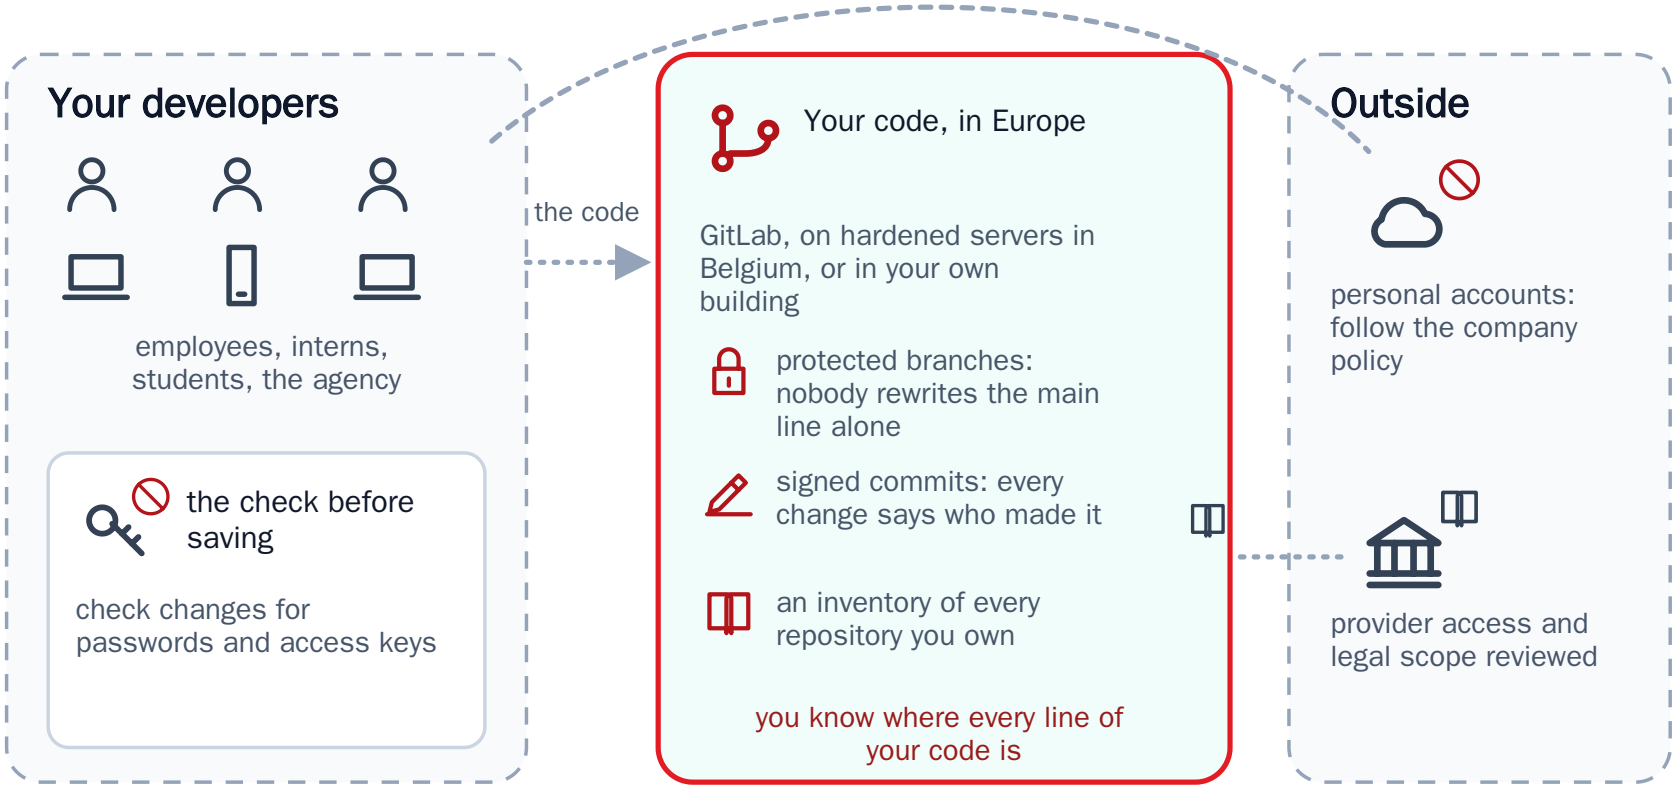

Agree the hosting, access, encryption keys and recovery responsibilities.

**S3** = Simple Storage Service · **CLOUD Act** = Clarifying Lawful Overseas Use of Data Act
Technical terms explained: www.alt-f1.be/en/acronyms/ · Explore this service →

# Sovereign Code

Host your software's source code with controlled access, in Europe or on your own servers.

**Your team's code, under company control.**

**Your development team**

- Employees and partners
- Company project accounts
- Access for the right people

**Sovereign Code**

- Company-controlled GitLab
- Review protected branches
- Check for exposed access keys

**A project you can recover**

- Keep project history
- Review and remove access
- Back up and test restoration

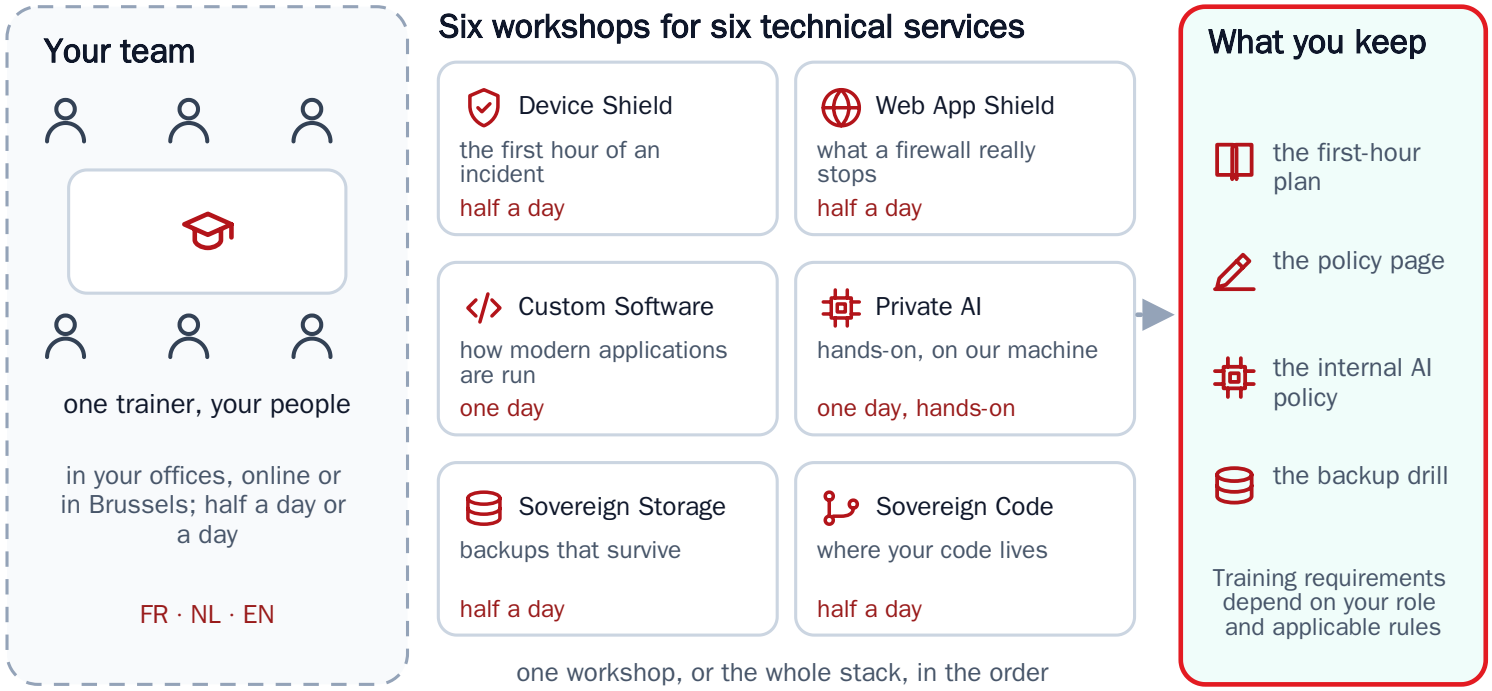

Choose European hosting or your own servers; document administrator access.

**CLOUD Act** = Clarifying Lawful Overseas Use of Data Act
Technical terms explained: www.alt-f1.be/en/acronyms/ · Explore this service →

# Workshops

Give your team practical training to use and secure your systems.

**Choose a topic. Practise it. Keep something useful.**

**Your team and its needs**

- Choose a service or topic
- Bring a real example
- Agree who should attend

**A practical workshop**

- Work through realistic tasks
- Make decisions together
- Half-day or full-day sessions

**What your team keeps**

- A first-hour incident plan
- Usable security or AI rules
- A backup-recovery exercise

In your office, online or in Brussels · French, Dutch or English.
